**WEB DEVELOPER**

Curious web developer with a strong user-centric approach to provide quality services and products. Utilize logic and compassion and translate client needs into functioning, real-life technological solutions. Build software using the most appropriate coding language for each project and test performance on different browsers and devices. Prioritize and accomplish goals within tight deadlines.

**DEVELOPER SKILLS**

- HTML, CSS, JavaScript, Typescript, Bootstrap
- Client-side: React, Redux, React Native, Angular
- Back-side: Node.js, Express, MongoDB, PostgreSQL,
- Content Management System (CMS)
- Cloud: AWS Lambda, Heroku, Netlify, Google Firestore
- Test Drive Development: Jest, Puppeteer, Enzyme

**SOFT SKILLS**

- 10 years in customer service and working in a team
- Speak fluent English, Japanese, and Cantonese
- Detailed knowledge of Devops
- Active listening and offering various solutions
- Prioritize tasks and focus on time management
- Hold accountability for my work

**PROJECTS**

**AI Image Generator**

2023

- Using React, Node.js, and OpenAI's Dall-e beta API, users can use their imagination to enter in any input and images will be randomly generated. Users can also upload an image from their local computer and the API will generate random variations of that photo. Images are also downloadable. [See project here.](#)

**ChatGPT CLONE**

2023

- Made with Node.js backend and React frontend, users can ask the AI questions and with the power of OpenAI's API, it replies with a swift response exactly like the original ChatGPT. [See project here.](#)
- This project allowed me to understand the importance of keeping API Key safe and the risks of public exposure.

**PODCAST BLOG**

2023

- Using primarily React, CSS, and ButterCMS's blog engine with built in SEO allows users to view blogs from their favorite podcasters by simply clicking on the blog card and taking them to the full article. Users can toggle to dark mode, and share blog links. [See project here](#)
- Using ButterCMS is more time effective in creating blog items and cards without having to create a backend. The built-in SEO feature can help generate more website traffic as well.

**MEET APP**

2022

- This is a serverless progressive web app built in React. It uses AWS Lambda, OAuth2 through Google, and uses Google API to show events from various cities. Users can filter number of events and cities. [See project here.](#)
- The Meet-App project went through numerous unit testing to ensure the app can run error-free. This case study helped me understand the importance of running tests before publicizing.

---

**MY-FLIX APP**

2022

- Built with MERN stack and Redux, this allows users to create their own profile, login, view the top 10 movies I entered in the database, add movies to favorites and remove them. [See project here.](#)
- This is the first project that taught me how to build both backend and frontend from scratch. This helped me build a solid base to create more future webpages using React.

**PROFESSIONAL EXPERIENCE**

Stouffville Family Eyecare, Stouffville, ON

**Manager Optician**

2021-present

- Assist clients with buying glasses, performing adjustments, and troubleshooting vision issues.
- Delegate tasks to other colleagues during peak times, proactive listening to patient's dissatisfaction about services and eyewear, inspect the product to ensure measurements and prescription are accurate.
- Strive for 100% customer satisfaction with tailored solutions, attentive service, and overall happy clients.

Warby Parker, Toronto, ON

**Optician**

2019-2021

**EDUCATION**

**FULL STACK WEB DEVELOPMENT CERTIFICATION**

2022

CAREER FOUNDRY, ONLINE

**BACHELOR OF ARTS, SPEECH COMMUNICATION**

2009

UNIVERSITY OF WATERLOO, ON
